

Liquid Nails® Instant Hold

Description

Liquid Nails Instant Hold is a high performance advanced polymer construction adhesive that delivers instant hold up to 400kg/m² on any building material, even vertical surfaces. * It is heat, UV and water resistant and doesn't require fasteners or clamps for many applications. *

Product Information

Packaging	Size	Colour
Cartridge	290 mL	White

Uses

Instantly holds up to 400kg per m² on any building material. For example, can instantly stick a 7 kg paver to a vertical wall using only adhesive and no fasteners or clamps*.

*Note: Weight is restricted for non-porous substrates such as metal and glass, where support may be required.

Technical Features

- Strong Bond
- Instant Grab*
- Highly Flexible
- Paintable (with water based paints)
- Indoor/Outdoor
- Water Resistant
- Heat Resistant
- Low Odour
- Wet or Dry Surfaces

Technical Details

Property	Typical Result
Appearance	Smooth white paste
Technology	Sil-X™
Service Temperature	Up to 70C, intermittent 120C
Cure Time	Up to 48 hours
Skin Time	Up to 2 hours
Elongation	>350%
Shelf Life	12 months

Indicative data only, not intended for preparation of specifications.

Application

- Ensure surfaces are clean and free from grease or loose particles
- Use a high thrust caulking gun and the supplied V-notched nozzle to apply in vertical stripes 5 cm apart. Ensure the V-shape is angled upward when applying
- Position materials and press together firmly. Due to the high initial hold of the product, support during curing is not usually required (subject to weight limitations for non-porous surfaces).
- Holds instantly but must not be disturbed until cured (up to 48 hours)
- Adjustable e.g. can be straightened for up to 15 minutes.

**NOTE: Holds instantly but must not be disturbed until fully cured. Weight is restricted for non-porous substrates including, for example, metal & glass- support may be required when the option exceeds 5 kg.

Not for PE, PP, PTFE and some rubbers

^Not for permanent water immersion

Clean Up

Clean up with turps before Instant Hold cures. Cured adhesive can be removed by scraping or sanding or with the help of Selleys silicone remover.

Handy Hints

- Allow for longer bonding times in colder weather
- Use a high thrust caulking gun for use- this product is thicker than traditional construction adhesives.
